

To whom it may concern,

I'm writing this letter to endorse Brady Bogda as a Software Engineer.

I worked with Brady during the summer of 2023 while he interned with SkySpecs. During his time here I acted as his mentor, which meant that every other week we'd meet to talk about his experience. Throughout the summer I became increasingly impressed with his initiative and drive. Rather than waiting for us to assign him work he actively looked for opportunities to contribute to our overall goals. Brady far exceeded our expectations for the internship cohort he was a part of and ultimately proved to be a valuable member of our engineering team.

A few highlights of his work at SkySpecs:

- Front-end work to our primary webapp's data tables to help customers filter and sort for the information they needed. Through this process he discovered and fixed longstanding bugs in our software and wrote Cypress and Jest tests as part of his changes. He also provided documentation for additional work to happen in this area beyond his tenure at SkySpecs.
- Fixed numerous issues including:
 - A bug related to the logic for handling image processing based on event types being returned by the event stream.
 - A bug related to debouncing inputs from users on a form.
 - A UI change to reformat the placement and usage of a primary delete button.
- Completed a feature to allow our customers to better manage uploading and downloading attachments they have put into our system. This involved navigating our entire stack including: back-end changes to modify GraphQL endpoints, reworking how we retrieve attachment URLs from S3 with pre-signed URLs, and updating our front-end to use the new endpoints.

Additionally, he's an enjoyable person to work with as well as a quick study. He shared his expertise when he knew about a problem and humility when he needed help. I'd happily work with Brady again if the opportunity presented itself.

Sincerely,

Chris Salzman

Software Engineer at SkySpecs
